ShieldStaff

Automated Security Questionnaire Engine — Built on Replit

Helps fractional vCISOs complete 150–300 question security questionnaires in minutes by reading client audit PDFs and cloud configs—backing every answer with a verified citation.

Reviewed in under 30 minutes with deterministic word-for-word quote verification.

vCISO = Fractional Chief Information Security Officer

150–300 Questions Per Audit, Grounded in Hundreds of Pages

TARGET PERSONA · FRACTIONAL vCISO & B2B SECURITY TEAMS

> *"I spend 15 hours a week manually checking SOC 2 PDFs just to answer the same 200 questions for different enterprise buyers."*

- **Who & Cadence:** Compliance consultant managing 5–15 startup/ mid-size clients; required every enterprise procurement cycle.
- **Goal:** Finish each questionnaire fast and accurately so sales deals move forward.
- **Pain:** Days of repeated PDF searching; fear of wrong or made-up answers.
- **Success Metric:** Full draft with verified citations, reviewed in **under 30 minutes**.

HOW DO THEY COPE TODAY? (CURRENT WORKAROUNDS)

- **Manual Search:** Takes days per questionnaire across hundreds of audit pages.
- **Generic Chatbots:** Paste all docs into a chatbot—high cost and missed details.
- **Hallucinations:** Chatbots invent false answers and fabricated page numbers.

WHY DOES IT MATTER? (BUSINESS & LEGAL IMPACT)

- **Revenue Bottleneck:** Slow security questionnaires directly block enterprise sales.
- **Compliance Liability:** A fake security answer is a severe legal risk.
- **Margin Erosion:** Drains consultant capacity and advisory profit margins.

LIVE ROUTING (TIER 1 ~60% · TIER 2 ~30% · TIER 3 ~10%)

Upload, Watch Answers Stream In, Check Proof, Export

STEP 1: INGEST

Upload buyer's CSV, SOC 2 PDF, cloud JSON—or tap **"Load Sample Enterprise Audit"**.

STEP 2: VERIFY

Answers stream into live grid. Click any row to inspect exact source page & paragraph.

STEP 3: EXPORT

Walk away with approved Excel/CSV in buyer's format + citation column; cache speeds future runs.

QUESTION	STREAMED ANSWER	CITATION	CONF	STATUS
Encryption at rest & key rotation?	AES-256 via AWS KMS; annual key rotation enabled.	SOC2 p.14	**0.96**	Verified Quote
Production database MFA enforced?	IAM policy enforces MFA across all production roles.	aws_iam.json	**0.94**	Verified Config
On-prem biometric physical logs?	**Insufficient evidence**	—	**Low**	Requires manual input

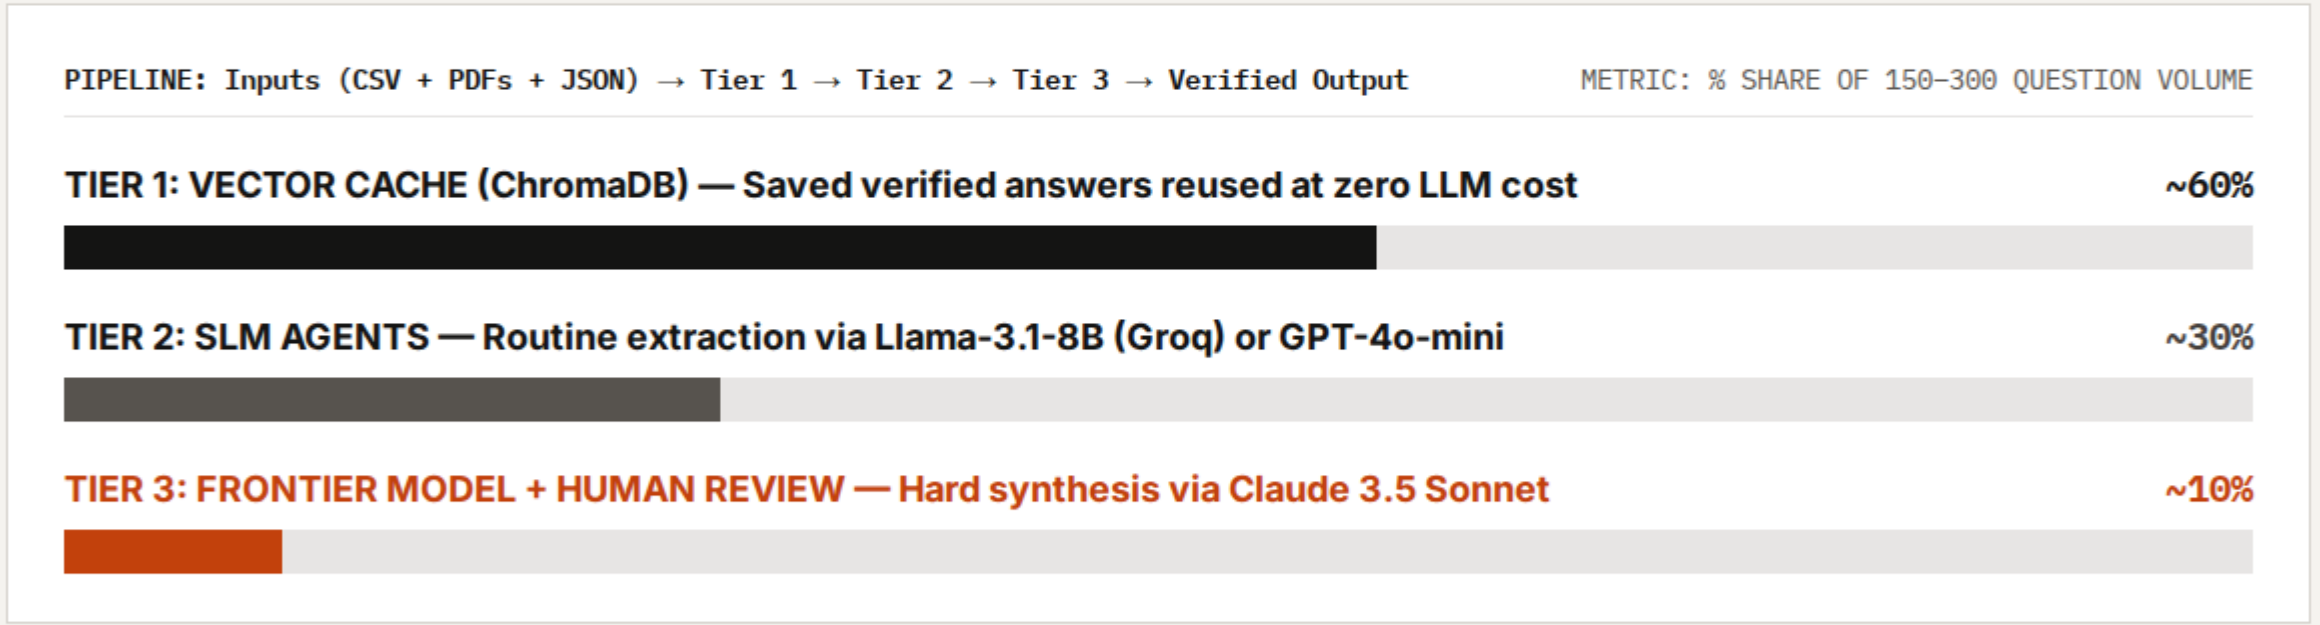

SOURCE EVIDENCE INSPECTOR (SOC2_Type2_Report.pdf · Page 14): Highlights exact verbatim paragraph on row click.

WIREFRAME WITH EXAMPLE DATA

"A spreadsheet can't read meaning. AI can, and we check every answer."

THE AI EDGE: Semantic Retrieval & 3-Tier Query Distribution

Unlike regular software, AI understands intent when buyer wording differs, finds proof inside messy PDFs/JSON, and writes grounded answers.

PIPELINE
LangGraph · ChromaDB
Built on replit

PERFORMANCE
Cost + latency optimized

Zero-Hallucination Guardrails & User Acquisition

WHAT IF THE AI GETS IT WRONG?

Deterministic Verification

- **Word-for-Word Quote Filter:** Cited quote must exist verbatim inside the source document match.
- **Strict Abstention:** Not verified? We state **“Insufficient evidence”**. Zero guessing.
- **Human Sign-Off:** Hard questions get a **“Requires manual input”** badge; humans approve all.

WHERE WILL WE FIND USERS?

Practitioner GTM Channels

- **Frictionless Trial:** Free 1-click sample audit + plug in your own AI key (BYOK).
- **Peer Validation & Launch:** Live tests with security peers; Product Hunt launch + LinkedIn/X post.
- **Communities:** Slack GRC groups, boutique vCISO advisory networks, and r/cybersecurity.

Engineering Trade-off: Prioritizing deterministic substring verification over unconstrained generation eliminates legal liability.

Execution Roadmap on Replit & Final Takeaway

WEEK 2 · OCT 23-29

CORE — Working AI Engine

- **Storage:** Backend workspace storage.
- **Ingestion:** Read audit PDFs & cloud JSON files.
- **Routing:** Tier 1, 2, 3 pipeline.

WEEK 3 · OCT 30 - NOV 5

DEPLOY — Live App Link

- **UI:** Live review screen; answers stream in.
- **Proof:** Click-to-see source + status filters.
- **Nov 4 Checkpoint:** Cost/ speed header, Excel/CSV export.

WEEK 4 · NOV 6 - 12

LAUNCH — Public Release

- **Setup:** 1-click sample audit + own-key setup.
- **Testing:** Live tests with security practitioners.
- **Ship:** Product Hunt launch + Final submission.

POST-HACKATHON

LATER — Next Horizon

- **IaC:** Terraform (**.tf** files).
- **Enterprise:** Bulk approval & audit logs.
- **Sync:** Live cloud connectors.

Every Security Answer Backed by Proof You Can Check—Reviewed in Under 30 Minutes.
